## Engineering Undergraduate

*I am an Undergraduate studying Aerospace Engineering at the University of Bath. I decided early on in my degree that spending a year on industrial placement would be of great benefit to me and my future career prospects. Not only would it help me gain some much needed experience for the final two years of my course, but it would also give me the opportunity to meet new people and get myself recognised in the aerospace industry.*

*The placement program consists of four individual 3-month placements rather than a single twelve-month placement that most other companies adopt. This has already given me the opportunity to gain broad experience by allowing me to work in a variety of different departments and specialised areas.*

*My first placement was situated in the EH101 Structural Engineering Department and my current placement is in the Aircraft Performance & Flight Test Department. In the future, I am hoping to work in the Advanced Engineering and the Math Modelling Departments. These are just a handful of the departments that are available for me to work in.*

*Once I have completed my placement I intend to return to University and complete the final two years of my degree, making much use of the knowledge I have gained from AgustaWestland. I am hopeful that once I finish my course I will have the opportunity to return to AgustaWestland and continue my career as an Aerospace Engineer.*
